Healthcare Triangle Inc., (HTI) Announces the Launch of its CloudEz Platform.

Fully managed cloud foundation platform helps healthcare and life sciences organizations reduce cost, improve outcomes, and innovate with fewer barriers.

PLEASANTON, California, June 15, 2021— HTI, a leading provider of cloud transformation solutions, has announced the launch of its CloudEz platform, as a SaaS offering, a secure turnkey framework that empowers life sciences and healthcare organizations to build a self-serve cloud platform. This cloud-as-a-service solution enables organizations to quickly set up agile, fully managed cloud work environments at scale—reducing compliance risk, lowering costs, and freeing up IT resources for strategic initiatives.

HTI's CloudEz platform is a vendor-agnostic, IP-driven solution that positions organizations to meet growing business demands with a self-serve catalog of cloud services in a secured and compliant IT infrastructure. Complete with cost management and chargeback capabilities, CloudEz enables organizations to host and consume critical enterprise applications ranging from data analytics to data science, clinical research, genomics, personalized healthcare, real-world evidence, IOT for medical devices, digital health, patient care, research and development, product development and testing, and more. Further, CloudEz gives organizations the ability to automate traditionally time-consuming, manual processes while addressing security, compliance, and governance needs enterprise wide.

"The demand for agility and scalability in life sciences and healthcare continues to grow as more organizations invest in digital transformation," said Suresh Venkatachari, CEO of HTI. "CloudEz offers organizations a continuous, secure platform for their IT infrastructure that complies with HIPAA and GxP regulatory requirements. This framework allows organizations to unleash the power of the cloud to deploy critical workloads and enhance business performance. It also enables organizations that rely on more than one cloud platform to streamline their multi-cloud infrastructure, so their business operations run in synergy."

Across industries, investment in cloud computing has risen during the pandemic as organizations realize the benefits of using the cloud to support continuity and cost efficiency in business operations. Gartner projects spending on public cloud services will grow 18.4% in 2021, with 70% of organizations currently using cloud computing planning to increase their cloud spending this year.

"The move toward cloud computing is an investment in business continuity, security, agility, and performance," said Sudish Mogli, Chief Technology Officer, HTI. "At HTI, we are committed to helping organizations gain optimal value from their move to the cloud. CloudEz gives organizations the right platform and competencies to strategically leverage their cloud investment and keep pace with a rapidly evolving environment."

HTI is a premier partner of AWS, a gold partner of Microsoft Azure, an affiliate partner of Google Cloud, and a work partner of GCP. With HITRUST certification pending, HTI will continue to enable top life sciences and healthcare organizations to leverage the public cloud to reduce IT costs, improve business and clinical outcomes, and accelerate innovation without compromising security and compliance.

About Healthcare Triangle, Inc. (HTI)

HTI, based in Pleasanton, California., reinforces healthcare progress through breakthrough technology and extensive industry knowledge and expertise. We support healthcare organizations—including hospitals and health systems and health plans—as well as pharma and life sciences organizations, in their efforts to improve health outcomes. Healthcare Triangle enables the rapid adoption of new technologies, data enlightenment, business agility, and response to immediate business needs and competitive threats. The highly regulated healthcare and life sciences industries rely on Healthcare Triangle for expertise in digital transformation encompassing the cloud, security and compliance, data lifecycle management, healthcare interoperability, and clinical and business performance optimization.
